

On an existing page, NTOC navigation happen as normal

The screenshot shows a rich text editor interface. The top toolbar includes options for heading, list, size, baseline, and insert. The main text area contains a heading `===Allotropes===` and a paragraph of text with several red squiggly lines underlining words like 'phosphorus', 'arsenic', 'allotropes', 'metallic grey', 'yellow', and 'black arsenic'. A citation is included in the text. Below the paragraph, there is another paragraph starting with 'The most common allotrope of arsenic is 'grey arsenic''. On the right side, a table of contents (NTOC) is visible, listing various sections: Arsenic, History, Characteristics, Isotopes, Allotropes, Chemical Compounds, Occurrence, Production, and Applications. The 'Allotropes' section is highlighted in grey.

But when the page is total blank and if user add headings, it's not highlighting the correct.

The screenshot shows the same rich text editor interface but with a blank page. The user has added several heading markers: `==Heading text==`, `===Heading text===`, `====Heading text====`, and `=====Heading text=====`. The fourth heading is highlighted with a red box. On the right side, the table of contents (NTOC) is visible, listing 'Arsenic' and several instances of 'Heading text' corresponding to the markers on the page. The bottom-most 'Heading text' entry in the NTOC is highlighted with a red box, indicating that the navigation is not correctly identifying the intended heading.
